

Permit Number: GP-52

Effective Date: January 29, 1999

Expiration Date: June 2, 2002

Name of Applicant: General Public, State of New Hampshire

AMENDMENT TO
DEPARTMENT OF THE ARMY
STATE OF NEW HAMPSHIRE
PROGRAMMATIC GENERAL PERMIT

Based on experience and after coordination with the U.S. Environmental Protection Agency, U.S. Fish and Wildlife Service, and the National Marine Fisheries Service, the NH PGP is hereby modified as follows:

All proactive saltmarsh restoration projects of any size, with the purpose of restoring or enhancing the natural functions and values of the wetland, may be reviewed under the New Hampshire Programmatic General Permit. Applicants may not proceed without written confirmation from the Corps. If the Corps, in coordination with Federal resource agencies, determines that a proposed saltmarsh restoration project will have more than minimal adverse impacts on the environment or public interest factors, an Individual Permit will be required.

All other conditions of the original NH PGP remain in full force and effect.

DISTRICT ENGINEER

DATE

Permit Number: GP-52

Effective Date: June 2, 1997
Expiration Date: June 2, 2002

Name of Applicant: General Public, State of New Hampshire

Department of the Army State of New Hampshire Programmatic General Permit

The New England Division of the U.S. Army Corps of Engineers (Corps) hereby issues a programmatic general permit in the State of New Hampshire.

The purpose of the New Hampshire Programmatic General Permit (NH PGP) is to minimize duplication between New Hampshire's Regulatory Program governing work within coastal and inland waters and wetlands and the Corps regulatory program under Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act.

Subject to certain exclusions and conditions, the general permit eliminates the need for applying for separate approval from the Corps for most minor, non-controversial work in New Hampshire when that work is authorized by the New Hampshire Wetlands Bureau.

Activities covered by this general permit include minor work and structures that are located in, or that affect, navigable waters of the United States (regulated by the Corps under Section 10 of the Rivers and Harbors Act of 1899), as well as the discharge of dredged or fill material into waters of the United States (regulated by the Corps under Section 404 of the Clean Water Act).

Activities already exempt from Corps jurisdiction are not affected by this general permit.

Procedures

The Corps will review projects according to the State of New Hampshire classification of minimum, minor and major impact projects as per the State of New Hampshire Wetland Rules Part WT 100 - 800, last revised on April 21, 1997. Projects with impacts up to 3 acres may be considered under the NH PGP. For projects falling under any of the screening categories, applicants should send two copies of their State application package to NH and label one of those copies "Corps of Engineers" to facilitate the review process. Any project impacting over 3 acres must be reviewed under the individual permit review procedures.

Proposals for work in New Hampshire that are subject to Corps jurisdiction that:

- meet the attached definitions of a state of New Hampshire **minimum impact project**;
- impact **less than 3,000 s.f. of inland waterways and/or wetlands including secondary impacts is not excluded by the criteria listed below**;
- receive approval from the NH Wetlands Bureau;
- receive all required federal and non-federal permits and/or licenses; and
- meet all of this permit's conditions, including avoidance and minimization (pp 5-11);
- represent a single and complete project as defined by the Corps; **may proceed upon authorization from the New Hampshire Wetlands Bureau without waiting for authorization from the Corps.**

NOTE: For the purposes of the NH PGP, **Minimum Impact Projects do not include: dams, dikes, water withdrawal or diversion projects requiring fills, wetland restoration projects, or any projects which involve in-stream work in other than low flow conditions (July 1 - September 30); or any projects involving more than 3,000 s.f. of a waterbody or wetland fill and secondary impacts. Also, not included under Minimum Impact Projects are those projects that include the reconstruction or replacement of currently unserviceable structures/fills.** These projects must be reviewed through the screening procedures for minor impact projects. **The activities in Section 10 waters not regulated by the Wetlands Bureau, formerly authorized under the Nationwide Permit Program and listed in Appendix A of this document are designated non-reporting activities.**

Proposals for work in New Hampshire that are subject to Corps jurisdiction that:

- meet the definitions of a state of New Hampshire **minor impact project**;
- have received approval from the NH Wetlands Bureau;
- have been screened by the Corps and the federal agencies¹;
- have received all other necessary required federal, state and local permits and/or licenses;
- meet all of this permit's conditions, including avoidance and minimization (pp. 5-11)

may proceed after 30 days from the date of the Wetland Bureau authorization unless the applicant receives written notification from the Corps either requesting additional information or requiring modifications to the proposal, or requiring an individual permit for the project.

Proposals for work in New Hampshire that are subject to Corps jurisdiction that:

- meet the definitions of a state of New Hampshire **major impact project and involves less than 3 acres of waterway and/or wetland fill including secondary impacts**;
- have received approval from the NH Wetlands Bureau;
- have been screened by the Corps and the federal agencies;
- have received all other necessary required federal, state and local permits and/or licenses;
- meet all of this permit's conditions, including avoidance and minimization (pp. 5-11)

may proceed upon receipt of written authorization from the Corps. The Corps will notify the applicant within 30 days of the date of their Wetlands Bureau permit of either authorization under the NH PGP, the need for additional information or the need for an Individual Permit Review.

In accordance with the regional environmental concerns, **most proposals for work which involve impacts over 1 acre will require an Individual Permit application**. However, the Corps has set an absolute limit on the PGP at 3 acres of wetland impact. Projects causing only minimal impacts will be considered under this PGP.

¹ U.S. Environmental Protection Agency, U.S. Fish and Wildlife Service, National Marine Fisheries Service

Generally, the following types of impacts may be viewed as minimal and are therefore eligible for the PGP (subject to agency screening and Corps approval) for projects impacting between 1 and 3 acres of wetlands:

- widenings and expansions
- edge effects and/or wetland crossings to access usable uplands
- small pocket wetlands scattered over a site
- low or degraded wetland fills

Each week, the Corps will review the projects approved by the Bureau. The Corps will coordinate these projects with the federal agencies with resources of concern (U.S. EPA, U.S. F&WS, NMFS).

The federal agencies will review the applications and, **within 10 working days** from receipt, express verbally any objections they have to the issuance of a NH PGP for the particular projects. The verbal objection must be within the agencies' area of expertise but does not need to be fully documented. **The verbal objection shall be followed within an additional 10 working days by a written response, signed by the Federal agency field supervisor or Branch Chief (as appropriate),** documenting the resource or species, within their area of expertise that could be impacted by the project and describing the impacts that either individually or cumulatively will be more than minimal. **The Corps will require individual permit review if any one of the agencies expresses and identifies a concern related to the aquatic environment within their area of expertise and request an individual permit review according to the procedures above.**

Upon receipt of an agency's written request for individual permit, but within 30 days from the Wetland Board approval, the Corps will notify the applicant in writing of the agency concerns and require an individual permit application. If, at a later date, the applicant is able to modify the proposal to address the agency(ies) concerns, the project may then be found to qualify for the NH PGP.

If the project qualifies for the NH PGP and there is no agency concern, no further contact with the Corps is necessary. **For minor impact projects,** applicants may proceed after the 30 day waiting period.

For major impact projects, the applicant must wait for written authorization from the Corps. If an applicant for a major impact project does not hear from the Corps within the 30 day waiting period, the applicant should call the Corps. To proceed with a major impact project without written authorization, is a violation of Federal law and the applicant will be subjected to an enforcement action by the Corps of Engineers.

In accordance with **Condition 4** of the NH PGP, the Corps reserves the right to take discretionary authority on any project, regardless of impact category, which the Corps determines will have more than minimal environmental impact, or based on a concern for any other factor of the public interest.

Individual Permit

Work that does not meet the terms and conditions of this PGP, will require an application for an individual permit from the Corps of Engineers (see 33 CFR Part 325.1). Applications and supporting materials for work that is clearly in the Individual Permit category should be submitted directly to the Corps as early as possible in order to expedite the permit review process.

Applications for work within the Corps jurisdiction which are obviously ineligible for authorization under the NH PGP (See conditions pages 5-11) should be sent directly to the Corps. **Waiting for a Corps determination regarding qualification for the NH PGP in these cases will unnecessarily delay the review process.** All projects which involve wetlands impacts over 3 acres are excluded from the NH PGP. If there is any doubt about a project's eligibility for the NH PGP, an applicant should contact the Corps for input as early in the process as practicable. General information and application forms can be obtained by calling the Corps New England District at 1-800-343-4789 or 1-800-362-4367 (within Massachusetts). Individual WQC and/or CZM consistency concurrence are required for individual permit applications. Additionally, filing an individual permit application does not relieve the applicant from the obligation to obtain all necessary state approvals.

The construction of solid fill structures and fills along the coastline or baseline from which the territorial sea is measured. Projects that involve fill below mean low water line (MLW) in a coastal area must therefore be coordinated with the Minerals Management Service (MMS), Outer Continental Shelf (OCS) Survey Group, pursuant to the submerged Lands Act (43 U.S.C. Section 1301-1315, 33 CFR 320.4(f)). The Corps will forward project information to MMS for their review. MMS will coordinate their determination with the Department of the Interior (DOI) Solicitor's Office. The DOI will have 15 calendar days from the date MMS is in receipt of the project information to determine if the baseline will be affected. No notification within the 15 day review period will constitute a "no effect" determination. Otherwise, the solicitor's notification to the Corps may be verbal but must be followed with a written confirmation within 10 business days from the date of the verbal notification. This procedure will be eliminated if the state of New Hampshire provides a written waiver of interest in any increase in submerged lands caused by a change in the baseline resulting from solid fill structures or fills authorized under this general permit.

Programmatic General Permit Conditions

The following conditions apply to activities authorized under this PGP:

GENERAL REQUIREMENTS:

1. Other Permits. Authorization under this general permit does not obviate the need to obtain other Federal, state, or local authorizations required by law or to comply with all Federal, State of New Hampshire, or local laws.

2. Applicability of this PGP shall be evaluated with reference to Federal jurisdictional boundaries using the 1987 Corps of Engineers Wetland Delineation Manual and subsequent Federal Guidance. Applicants are responsible for ensuring that the boundaries used satisfy the federal criteria defined at Title 33 CFR 328-329.

3. Minimal Effects. Projects authorized by this general permit shall have minimal individual and cumulative adverse environmental impacts as determined by the Corps.

4. Discretionary Authority. Notwithstanding compliance with the terms and conditions of this permit, the Corps of Engineers retains discretionary authority to require an application for an individual permit for any project based on concerns for the aquatic environment or for any other factor of the public interest. This authority is invoked on a case-by-case basis whenever the Corps determines that the potential consequences of the proposed activity warrant individual review based on the concerns stated above. This authority may be invoked for projects with cumulative environmental impacts that are more than minimal, or if there is a special resource or concern associated with a particular project that is not already covered by the remaining conditions of the PGP and that warrants greater review. Whenever the Corps notifies an applicant that an individual permit may be required, authorization under this PGP is void, and no work may be conducted until the individual Corps permit is obtained, or until the Corps notifies the applicant that further review has demonstrated that the work may proceed under this PGP.

5. Single and Complete Projects. This PGP shall not be used for piecemeal work and shall be applied to single and complete projects. All components of a single project shall be treated together as constituting one single and complete project. All planned phases of multi-phased projects shall be treated together as constituting one single and complete project. However, this PGP can be used to permit a single phase of a multi-phase project in which only one phase will be constructed in the life of the permit (5 years) or for those projects which have "stand alone" aspects. This PGP shall not be used for any activity that is part of an overall project for which an individual permit is required.

6 . That the Corps review procedures for the following work are not altered by this PGP; this work will continue to require submission of an application to, and written authorization from, the Corps of Engineers before work may proceed:

a. Any activity associated with new boating facilities or with the extension of the areal limits of existing boating facilities. For the purpose of this condition, "boating facilities", are marinas, yacht clubs, boat clubs and other entities that rent or sell mooring space. However, the vessels using the structures may be used for commercial purposes.

b. Projects involving moorings within the horizontal limits, or with moored vessels that extend within the limits, of a Corps Federal Navigation project, except those in Federal anchorages.

c. Any structure, pier or float that extends, or with docked or moored vessels that extend, within the horizontal limits of a Corps Federal Navigation Project.

NATIONAL CONCERNS:

7. Historic Properties. Any activity authorized by this PGP shall comply with Section 106 of the National Historic Preservation Act. Information on the location and existence of historic resources can be obtained from the New Hampshire Historic Preservation Office and the National Register of Historic Places.

Applicants with minor or major impact projects which will undergo the screening process, shall submit a copy of their application materials to the New Hampshire State Historic Preservation Officer (SHPO) (address on page 12 of this document) to be reviewed for the presence of historic/archaeological resources in the permit area that may be affected by the proposed work. The Corps will then be notified by the SHPO if there are State concerns that the proposed work will have an effect on historic resources. The applicant should include with their State application, either a copy of their cover letter, or a statement of having sent their application materials to the SHPO.

If the permittee, during construction of work authorized herein, encounters a previously unidentified archaeological or other cultural resource within the area subject to Corps jurisdiction that might be eligible for listing in the National Register of Historic Places, he/she shall stop work and immediately notify the District Engineer and the SHPO.

8. National Lands. Activities authorized by this PGP shall not impinge upon the value of any National Wildlife Refuge, National Forest, National Estuarine Research Preserves, or any other area administered by the U.S. Fish and Wildlife Service, U.S. Forest Service, or National Park Service.

9. Endangered Species. No activity is authorized under this PGP which may affect a threatened or endangered species or a species proposed for such designation, as identified under the Federal Endangered Species Act (ESA); or which is likely to destroy or adversely modify the critical habitat of such species; or which would result in a "take" of any threatened or endangered species of fish or wildlife, or which would result in any other violation of Section 9 of the ESA protecting threatened or endangered species of plants. Applicants shall notify the Corps if any listed species or critical habitat is in the vicinity of the project and shall not begin work until notified by the District Engineer that the requirements of the Endangered Species Act have been satisfied and that the activity is authorized. Information on the location of threatened and endangered species and their critical habitat can be obtained from the U.S. Fish and Wildlife Service (F&WS) and National Marine Fisheries Service (NMFS)(addresses on page 14 of this document). If consultation with the F&WS or NMFS results in project modifications or permit conditions which resolve the issue, the Corps may issue an PGP.

10. Wild and Scenic Rivers. Any activity that occurs in a component of, or within 0.25 miles up or downstream of the main stem or tributaries of a river segment of, the National Wild and Scenic River System, must be reviewed by the Corps under the screening procedures of this PGP. This condition applies to both designated Wild and Scenic Rivers and rivers designated by Congress as Study Rivers for possible inclusion while such rivers are in an official study status. Currently, Wildcat Creek starting in the White Mountain National Forest running to Jackson, NH, the Lamprey River from the southern Lee town line to the confluence with the Piscassic River, and the Merrimack River from Franklin, NH to the dam in Concord, NH are designated as Wild and Scenic Rivers in the State of New Hampshire.

11. Federal Navigation Project. Any structure or work that extends closer to the horizontal limits of any Corps navigation project than a distance of three times the project's authorized depth (see attached map for locations of these projects) shall be reviewed under the screening procedures and shall be subject to removal at the owner's expense prior to any future Corps dredging or the performance of periodic hydrographic surveys.

12. Navigation. There shall be no unreasonable interference with navigation by the existence or use of the activity authorized herein, and no attempt shall be made by the permittee to prevent the full and free use by the public of all navigable waters at or adjacent to the activity authorized herein.

MINIMIZATION OF ENVIRONMENTAL IMPACTS:

13. Minimization. Discharges of dredged or fill material into waters of the United States shall be avoided and minimized to the maximum extent practicable.

14. Work in Wetlands. Heavy equipment working in wetlands shall be avoided if possible. If such work is unavoidable, when site conditions are such that rutting, soil compaction, erosion or other disturbance would result, equipment shall be placed on mats or other measures taken such as delaying work until frozen or dry ground conditions exist to minimize adverse effects to soil and vegetation. Disturbed areas in wetlands shall be restored to preconstruction contours and conditions upon completion of the work. In many cases the mats are considered a discharge of fill material and must be included in the quantification of impact area and authorized by this PGP.

15. Temporary Fill. Temporary fill in waters and wetlands authorized by this PGP (e.g. access roads, cofferdams) shall be properly stabilized during use to prevent erosion. In addition, temporary fill in tidal, navigable or inland waters of the U.S. should consist of a material that minimizes impacts to water quality (e.g. sandbags or clean, gravel and/or stone). Temporary fill in wetlands shall be placed on geotextile fabric which is laid on the existing wetland grade. Temporary fills shall be disposed of at an upland site and suitably contained to prevent erosion and/or transport to a waterway or wetland. All areas of temporary fill shall be restored to their original elevations.

16. Sedimentation and Erosion Control. Adequate sedimentation and erosion control management measures, practices and devices, such as phased construction, vegetated filter strips, geotextile silt fences or other devices, shall be installed and properly maintained to reduce erosion and retain sediment on-site during and after construction. They shall be capable of preventing erosion, of collecting sediment, suspended and floating materials, and of filtering fine sediment. These devices shall be removed upon completion of work and the disturbed areas shall be stabilized. The sediment collected by these devices shall be removed and placed at an upland location, in a manner that will prevent its later erosion into a waterway or wetland. All exposed soil and other fills shall be permanently stabilized at the earliest practicable date.

17. Waterway/Wetland Crossings.

(a) All temporary and permanent crossings of waterbodies and wetlands shall be suitably culverted, bridged, or otherwise designed to withstand and to prevent the restriction of high flows, to maintain existing low flows, and so as not to obstruct the movement of aquatic life indigenous to the waterbody beyond the actual duration of construction.

(b) No open trench excavation in flowing waters shall be allowed unless the activity is screened pursuant to the minor impact project procedures and conditioned to protect the aquatic environment.

(c) Temporary bridges, culverts, or cofferdams shall be used for equipment access across streams (note: areas of fill and/or cofferdams must be included in total waterway/wetlands impacts to determine applicability of this general permit).

(d) For projects that meet the definition of a Minimum Impact Project, unconfined in-stream construction work shall be conducted during the low flow period of July 15 - October 1 in any year. Projects that are conducted outside of that time period do not qualify for Minimum Impact Project procedures under this PGP and shall be screened pursuant to Minor Impact Project procedures, regardless of the waterway and wetland fill and/or impact area.

18. Discharge of Pollutants. All activities involving any discharge of pollutants into waters of the United States authorized under this general permit shall be consistent with applicable water quality standards, effluent limitations, standards of performance, prohibitions, and pretreatment standards and management practices established pursuant to the Clean Water Act (33 U.S.C. 1251), and applicable state and local laws. If applicable water quality standards, limitations, etc., are revised or modified during the term of this permit, the authorized work shall be modified to conform with these standards within 6 months of the effective date of such revision or modification, or within a longer period of time deemed reasonable by the District Engineer in consultation with the Regional Administrator of the Environmental Protection Agency. Applicants may presume that state water quality standards are met with issuance of the Section 401 Water Quality Certification (Applicable only to the Section 404 activity).

19. Spawning Areas . Discharges into known: a) fish and shellfish spawning or nursery areas; or b) amphibian and waterfowl breeding areas, during spawning or breeding seasons shall be avoided. Impacts to these areas shall be minimized to the maximum extent practicable during all other times of the year.

20. Storage of Seasonal Structures. Coastal structures such as pier sections, floats, etc., that are removed from the waterway for a portion of the year shall be stored in an upland location, located above mean high water and not in a vegetated wetland.

21. Environmental Values. The permittee shall make every reasonable effort to carry out the construction or operation of the work authorized herein in a manner so as to maintain as much as is practicable, and to minimize any adverse impacts on, existing fish, and wildlife, and natural environmental values.

PROCEDURAL CONDITIONS:

22. Inspections. The permittee shall allow the District Engineer or his authorized representative(s) to make periodic inspections at any time deemed necessary in order to ensure that the work is being performed in accordance with the terms and conditions of this permit. The District Engineer may also require post-construction engineering drawings for completed work, and post-dredging survey drawings for any dredging work.

23. Maintenance. The permittee shall maintain the work or structures authorized herein in good condition, including maintenance to ensure public safety. Note that this does not include maintenance of dredging projects.

24. Property Rights. This PGP does not convey any property rights, either in real estate or material, or any exclusive privileges, nor does it authorize any injury to property or invasion of rights or any infringement of federal, state, or local laws or regulations.

25. Modification, Suspension, and Revocation. This PGP may be either modified, suspended, or revoked in whole or in part pursuant to the policies and procedures of 33 CFR 325.7; any such action shall not be the basis for any claim for damages against the United States.

26. Restoration. The permittee, upon receipt of a notice of revocation of authorization under this PGP, shall restore the wetland or waterway to its former conditions without expense to the United States, and as directed by the Secretary of the Army or his authorized representative. If the permittee fails to comply with such a directive, the Secretary or his designee may restore the wetland or waterway to its former condition, by contract or otherwise, and recover the cost from the permittee.

27. Special Conditions. The Corps may impose other special conditions on a project authorized pursuant to this PGP that are determined necessary to minimize adverse environmental effects or based on any other factor of the public interest. These may be based on concerns from a State or Federal Resource Agency. Failure to comply with all conditions of the authorization, including special conditions, will constitute a permit violation and may subject the permittee to criminal, civil, or administrative penalties or restoration.

28. False or Incomplete Information. If the Corps makes a determination regarding the eligibility of a project under this PGP, and subsequently discovers that it has relied on false, incomplete, or inaccurate information provided by the permittee, the permit shall not be valid and the U.S. government may institute legal proceedings.

29. Abandonment. If the permittee decides to abandon the activity under this PGP, unless such abandonment is merely the transfer of property to a third party, he/she may be required to restore the area to the satisfaction of the District Engineer.

30. Enforcement cases. This general permit does not apply to any existing or proposed activity in Corps jurisdiction associated with a Corps of Engineers or EPA enforcement action until such time as the enforcement action is resolved or the Corps determines that the activity may proceed independently without compromising the enforcement action.

DURATION OF AUTHORIZATION / GRANDFATHERING:

31. Duration of Authorization. The expiration date for individual projects authorized under this PGP coincides with that of the State authorization for that particular project.

This PGP will expire on June 2, 2002, however, activities authorized under this PGP which are under construction or are under contract to begin construction in reliance upon this authorization will remain authorized provided the activity is completed within twelve months of June 2, 2002, unless:

- a) the PGP is either modified or revoked, or
- b) discretionary authority has been exercised in accordance with 33 CFR 325.2(e)(2).

Activities completed under this PGP will continue to be authorized by the PGP after the expiration date.

32. Previously Authorized Activities.

a) Projects that have received written authorization from the Corps under the Nationwide permits or under the previous New Hampshire PGP prior to issuance of this PGP shall remain authorized as specified in each authorization.

b) Non-reporting nationwide permit activities or NH PGP minimum impact activities which have commenced, (i.e., are under construction or are under contract to commence) prior to the issuance date of this PGP, remain authorized provided the activity is completed within twelve months of the date

of issuance of this PGP. These activities are still subject to discretionary authority on a case-by-case basis in accordance with Condition 4. The applicant must be able to document to the satisfaction of the Corps that the project was under construction or contract by the appropriate date.

c) Activities authorized pursuant to 33 CFR Part 330.3 (activities occurring before certain dates) are not affected by this PGP.

DISTRICT ENGINEER

DATE

Appendix A

* The placement of aids to navigation and regulatory markers which are approved by and installed in accordance with the requirements of the U.S. Coast Guard.

* Fish and wildlife harvesting devices and activities such as pound nets, crab traps, crab dredging, eel pots, lobster traps, duck blinds, clam and oyster digging, and small fish attraction devices such as open water fish concentrators (sea kites, etc.). This authorizes shellfish seeding provided this activity does not occur in wetlands or sites that support submerged vegetation (including sites where submerged aquatic vegetation is determined to exist, but may not be present in a given year). This does not authorize artificial reefs or impoundments and semi-impoundments of waters of the United States for the culture or holding of motile species such as lobster, or the use of covered oyster trays or clam racks.

* Devices whose purpose is to measure and record scientific data such as staff gages, tide gages, water recording devices, water quality testing and improvement devices and similar structures. Small weirs and flumes constructed primarily to record water quantity and velocity are also authorized provided the discharge is limited to 10 cubic yards.

* Survey activities including core sampling, seismic exploratory operations, plugging of seismic shot holes and other exploratory-type bore holes, soil survey and sampling, and historic resources surveys. Discharges and structures associated with the recovery of historic resources are not authorized. Drilling and the discharge of excavated material from test wells for oil and gas exploration is not authorized; the plugging of such wells is authorized. Fill placed for roads, pads and other similar activities is not authorized, nor is any permanent structure.

* Structures, buoys, floats and other devices placed within anchorage or fleeting areas to facilitate moorage of vessels where such areas have been established for that purpose by the U.S. Coast Guard.

* Non-commercial, single-boat, mooring buoys not associated with any boating facility, and authorized by the local harbormaster, provided it is not located in a Federal Navigation project other than a Federal anchorage.

* Temporary buoys, markers, small floating docks, and similar structures placed for recreational use during specific events such as water skiing competitions and boat races or seasonal use provided that such structures are removed within 30 days after use has been discontinued. At Corps of Engineers reservoirs, the reservoir manager must approve each buoy or marker individually.
